

Staging Specifications:-

We currently have for hire 3 types of staging:-

Component Staging

Component staging can be built on level surfaces in modules of 2400 x 1200mm at 300mm, 600mm, and 900mm heights. Marquees can be erected over the stages in outdoor environments, or tiered to make choir stands on flat structures.

Small Mobile Staging

Small mobile staging can be towed with a small truck, and can be erected on uneven terrain from as little as 30min. Measuring 4.8m x 6.0m, it can be constructed with or without PA wings. Lighting bars are placed in the roof for hanging fixtures, or decorations / backdrops / banners, etc.

Larger Mobile Staging

Under construction is another of our larger mobile stages – measuring 10m in width and 8m in depth. The ceiling height from stage floor is approx. 4.2m with numerous power outlets for lighting, hydraulic legs for levelling, and PA wings or scaffold towers for placing the FOH sound.

A FOH tent is available in 3x3m or 3x6m configuration. Crash barriers, stage risers, choir stands, catwalks, curtains, etc. are all part of the extras that can arrive on site.
